Page 17, paragraph 11, line 25:

B3
Fig. 21 is a vertical section taken generally
along line 113-113 of Fig. 20;

[
Page 22, paragraph 2, line 9:

B4
Each of the bars 56 and 57 are T-shaped in cross
section, as seen in Fig. 8, having a flange portion 60a and
a web portion 61 projecting forwardly toward the ball strik-
ing wall 12a. Thus, each of the bars defines a "T" beam
where the maximum stress is at the rear surface of the
flange 60, which is the widest and strongest part of the
bar. The rear surface of the flange 60, of course, goes
into tension upon ball impact while the forward surface of
the web 61 goes into compression at ball impact according to
known beam technology.
